Development of Green Tourism

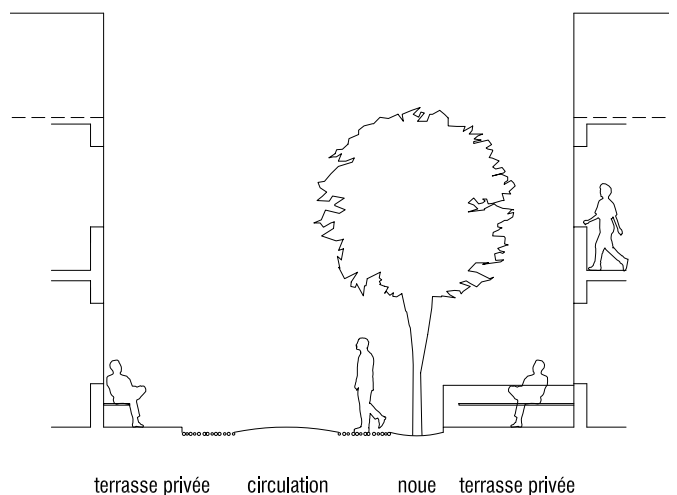

The site is located on a parcel adjacent to the Golf de la Picardière. It involves the construction of 35 housing units, a seminar and festival room for approximately 200 people and a swimming pool with additional buildings on the adjoining premises. The parking slots are grouped on the entrance of the site and allow creating a green corridor between the entrance and the woods. The houses are lined up in two rows (north-south orientation) parallel to the green connection. A large open space in the centre of the village brings the landscape in between the settlement. The rows of houses are interspersed by public spaces, connected by a non-linear east-west route.

Technical details

Reduction of the mineral surfaces

Infiltration of the rainwater on the surface

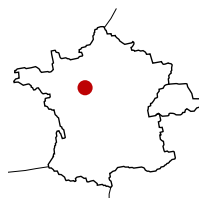

Houses in wood construction

Section of the external space between the housing units
